Computational scientist working across statistical physics, high-performance molecular simulation, and machine learning.

EXPERIENCE

Sep 2020 —
Aug 2025

Postdoctoral Associate

Massachusetts Institute of Technology · Cambridge, MA

- Led molecular-dynamics and machine-learning studies of interfacial electrostatics.
- Designed and implemented GPU-accelerated Bayesian inference models that revealed previously undetected patterns in single-atom interfacial electric-field data.
- Developed high-performance, GPU-accelerated Julia implementations of Ewald summation and related electrostatics methods.
- Performed free-energy perturbation and thermodynamic-integration calculations for electron-transfer reactions at nanoparticle and electrode interfaces.
- Built end-to-end simulation and analytics pipelines that cut compute time two- to fivefold across coarse-grained polymers, polarizable nanoparticles, and interfacial electric-field systems.
- Standardized reproducible pipelines (Pixi, Docker, CI) that were adopted across projects.
- Recognized by the chemistry department for mentoring graduate and undergraduate students in research.

Sep 2014 —
Aug 2020

Graduate Student Researcher

University of Maine · Orono, ME

- Generated and analyzed ~100 TB of molecular-dynamics data to understand how water-mediated interactions govern helix-coil transitions of peptides confined in carbon nanotubes.
- Developed kinetic models of ligand-mediated nanocluster formation and growth.

EDUCATION

2014 — 2020

Ph.D., Physical Chemistry

University of Maine · Orono, ME

2010

B.S., Chemistry

University of Maine · Orono, ME

AWARDS AND FUNDING

NSF Postdoctoral Research Fellowship in Biology

National Science Foundation · 2022–2024

Postdoctoral Enrichment Program Award

Burroughs Wellcome Fund · 2021–2024

Mentorship Spotlight Award

MIT Department of Chemistry · 2022

Sequoyah Fellow

American Indian Science and Engineering Society · 2016

TECHNICAL SKILLS

LANGUAGES

Python, Julia, C++, Fortran

MACHINE LEARNING AND STATISTICS

PyTorch, PyMC, scikit-learn, XGBoost

HIGH-PERFORMANCE COMPUTING

CUDA, OpenMP, MPI, Numba, SLURM

MOLECULAR SIMULATION

OpenMM, GROMACS, LAMMPS, HOOMD-blue, RDKit, VMD, PyMOL

DATA AND INFRASTRUCTURE

NumPy, pandas, Polars, Dask, AWS (S3, Batch), Docker, Pixi, Git
